Revenue Impact Analysis: Pre-Crisis vs. Crisis Phase

Order Volume vs. Cancellation Rate: Crisis Impact Analysis

Highest Order Decline by City

City	Pre-Crisis Orders	Crisis Orders	% Change
Bengaluru	31277	9311	▼70.2%
Mumbai	17848	5322	▼70.2%
Ahmedabad	7648	2303	▼69.9%
Delhi	15580	4704	▼69.8%
Pune	8817	2662	▼69.8%

Business Impact Analysis

- The data reveals a sharp, systemic decline beginning in **June**, where monthly revenue plummeted from **₹0.74 Cr** in May to just **₹0.29 Cr**.
- This suggests the "Crisis" wasn't a slow fade but a specific operational or market event that occurred at the end of Q2.
- There is a clear correlation between the **52.1% increase in delivery times** (averaging over **60 minutes**) and the collapse of customer satisfaction.
- The drop in average rating from **4.50 to 2.50** indicates that logistical delays were a primary driver of the crisis, likely leading to the high churn rate.
- As **Order Volume** decreased, the **Cancellation Rate** spiked to a peak of **12.51%** in August—nearly double the pre-crisis baseline of ~6%.

Impact of Delivery Speed on Customer Ratings

SLA Compliance Trend by Month

Delay_Minutes and Cancellation Rate by Month Name and Phase

Crisis SLA Compliance % by city

Operational Crisis: Executive Summary

- **Big Drop in On-Time Deliveries:** Before the crisis, about **43.6%** of orders were delivered on time. Once the crisis hit in June, that number crashed down to just **12.2%** (a **72.0% drop**).
- **Massive Delays:** On average, late orders were delayed by **17.60 minutes**. Before the crisis, delays were barely noticeable at just 2.02 minutes (meaning an extra **15.58 minutes** of waiting time).
- **Longer Total Trip Times:** Because of the disruptions, the total time it took to complete a delivery jumped up by **52.1%**, averaging a long **60.12 minutes** per trip.
- **Unhappy Customers:** Because food was arriving late, customer satisfaction dropped terribly, hitting a low of **2.3 stars** by September. This also caused order cancellations to peak at **12.51% in August**.
- **Hit Hardest in Big Cities:** The delivery breakdown happened everywhere, but **Pune (12.8%), Delhi (12.5%),** and **Mumbai (12.4%)** ended up with the lowest percentages of on-time deliveries.

Customer Retention & Sentiment

Active Customers by Month

High-Rated Customers Lost by City

Retention Rate by City

Retention vs. Churn Status

Key Findings

- Active customers declined by 62.7%, falling from 87K to 32K during the crisis.
- Only 16.2% of pre-crisis customers continued ordering, resulting in an 83.8% churn rate.
- 90.4% of highly-rated customers were lost, indicating a significant decline in customer trust and loyalty.
- Bengaluru, Mumbai, and Delhi recorded the highest loss of highly-rated customers.
- Retention rates remained below 18% across all cities, showing that the impact was widespread rather than city-specific.
- The decline in highly-rated customers may negatively impact future referrals and organic growth.
- Recovery initiatives should prioritize re-engaging previously satisfied customers in major cities.
- Monitoring retention and customer sentiment together provides early warning signals for future operational disruptions.

Strategic Recommendations & Recovery Plan

Strategic Recommendations

Operational Recovery

- Improve rider allocation and route optimization to reduce delivery delays.
- Implement daily SLA monitoring with automated alerts for underperforming zones.
- Monitor restaurant preparation times and identify bottlenecks.

Customer Retention

- Launch win-back campaigns targeting lost high-rated customers.
- Prioritize Bengaluru, Mumbai, and Delhi for customer recovery initiatives.
- Offer personalized incentives to previously active customers.

Business Monitoring

- Track SLA Compliance, Rating, Cancellation Rate, and Retention together.
- Create an early warning framework to identify service deterioration before customer churn increases.

Key Learnings from the Crisis

- Delivery time increased by 52.1% during the crisis.
- Customer ratings dropped from 4.5 to 2.5.
- Cancellation rates nearly doubled.
- Active customers declined by 62.7%.
- Only 16.2% of customers were retained.
- 90.4% of highly-rated customers stopped ordering.
- Operational failures directly impacted customer trust, retention, and revenue.
